Digital Image Processing and Analysis Scott E Umbaugh, 2022-12-30 Digital Image Enhancement, Restoration and Compression focuses on human vision-based imaging application development. Examples include making poor images look better, the development of advanced compression algorithms, special effects imaging for motion pictures and the restoration of satellite images distorted by atmospheric disturbance. This book presents a unique engineering approach to the practice of digital imaging, which starts by presenting a global model to help gain an understanding of the overall process, followed by a breakdown and explanation of each individual topic. Topics are presented as they become necessary for understanding the practical imaging model under study, which provides the reader with the motivation to learn about and use the tools and methods being explored. The book includes chapters on imaging systems and software, the human visual system, image transforms, image filtering, image enhancement, image restoration, and image compression. Numerous examples, including over 700 color images, are used to illustrate the concepts discussed. Readers can explore their own application development with any programming language, including C/C++, MATLAB®, Python and R, and software is provided for both the Windows/C/C++ and MATLAB environments. The book can be used by the academic community in teaching and research, with over 1,000 PowerPoint slides and a complete solutions manual to the over 230 included problems. It can also be used for self-study by those involved with application development, whether they are engineers, scientists or artists. The new edition has been extensively updated and includes numerous problems and programming exercises that will help the reader and student develop their skills.

Images that Move Patricia Spyer, Mary Margaret Steedly, 2013 *Images That Move* is concerned with how images take place in wider worlds: how they move around, via processes of transmission and uptake, but, equally importantly, how they move their audiences affectively. Images play a significant part in projects of poetic world-making and political transformation. They participate in the production of commensuration or of incommensurability, enact moments of prophecy or exposure, and attract or repel spectators' attention. Images move, then, but not just as they wish, and any examination of images in motion must also recognise the blockages and breakdowns that prevent their movement as well as the enframings or stickinesses that trap them in particular places, prevent them from reaching others, or hedge their arrival in specific ways. The contributors explore topics ranging from high art to mass media, religious iconography to pornography, and popular photography to political cartoons in a range of contexts and media including photography in early twentieth century China, art and literature in contemporary South Africa, upscale real estate development in India, occult media images and the

aesthetic of appearance in urban Indonesia, and film censorship in Nigeria. All of these instances of the visual continuum require different ways of highlighting and addressing the problematics of images in motion. Images That Move traces some of the tangled paths of images' travels and returns, unfolding their effects and aftereffects and scanning the diverse and variable publics-fixed or ephemeral, situated or dispersed-that these moving images call into being. Contributors: Ernst van Alphen, Christiane Brosius, Steven C. Caton, Finbarr Barry Flood, Brian Larkin, Oliver Moore, Rosalind C. Morris, Christopher Pinney, Patricia Spyer, Mary Margaret Steedly.

Hyperspectral Imaging Technology in Food and Agriculture Bosoon Park, Renfu Lu, 2015-09-29 Hyperspectral imaging or imaging spectroscopy is a novel technology for acquiring and analysing an image of a real scene by computers and other devices in order to obtain quantitative information for quality evaluation and process control. Image processing and analysis is the core technique in computer vision. With the continuous development in hardware and software for image processing and analysis, the application of hyperspectral imaging has been extended to the safety and quality evaluation of meat and produce. Especially in recent years, hyperspectral imaging has attracted much research and development attention, as a result rapid scientific and technological advances have increasingly taken place in food and agriculture, especially on safety and quality inspection, classification and evaluation of a wide range of food products, illustrating the great advantages of using the technology for objective, rapid, non-destructive and automated safety inspection as well as quality control. Therefore, as the first reference book in the area, *Hyperspectral Imaging Technology in Food and Agriculture*

focuses on these recent advances. The book is divided into three parts, which begins with an outline of the fundamentals of the technology, followed by full covering of the application in the most researched areas of meats, fruits, vegetables, grains and other foods, which mostly covers food safety and quality as well as remote sensing applicable for crop production. Hyperspectral Imaging Technology in Food and Agriculture is written by international peers who have both academic and professional credentials, with each chapter addressing in detail one aspect of the relevant technology, thus highlighting the truly international nature of the work. Therefore the book should provide the engineer and technologist working in research, development, and operations in the food and agricultural industry with critical, comprehensive and readily accessible information on the art and science of hyperspectral imaging technology. It should also serve as an essential reference source to undergraduate and postgraduate students and researchers in universities and research institutions.
