Guns 101 David Steier,2011-06-22 With a background in firearms instruction, sales, and organizations, Steier's knowledge has been cultivated through years of in-depth experience and personal dedication. In Guns 101, Steier covers the basics (what guns are for and how they work), but also discusses many types of firearms, firearm accessories, and gun activities—enough to help any reader carry on an intelligent conversation. From shop etiquette to do-it-yourself repairs, Guns 101 answers all of your gun questions. Complete with diagrams and photographs that make all of the technical details clear, this book is essential reading for any newcomer to the world of guns.

Fundamentals and Methods of Machine and Deep Learning Pradeep Singh,2022-03-02 FUNDAMENTALS AND METHODS OF MACHINE AND DEEP LEARNING The book provides a practical approach by explaining the concepts of machine learning and deep learning algorithms, evaluation of methodology advances, and algorithm demonstrations with applications. Over the past two decades, the field of machine learning and its subfield deep learning have played a main role in software applications development. Also, in recent research studies, they are regarded as one of the disruptive technologies that will transform our future life, business, and the global economy. The recent explosion of digital data in a wide variety of domains, including science, engineering, Internet of Things, biomedical, healthcare, and many business sectors, has declared the era of big data, which cannot be analysed by classical statistics but by the more modern, robust machine learning and deep learning techniques. Since machine learning learns from data rather than by programming hard-coded decision rules, an attempt is being made to use machine learning to make computers that are able to solve problems like human experts in the field. The goal of this book is to present a practical approach by explaining the concepts of machine learning and deep learning algorithms with applications. Supervised machine learning algorithms, ensemble machine learning algorithms, feature selection, deep learning techniques, and their applications are discussed. Also included in the eighteen chapters is unique information which provides a clear understanding of concepts by using algorithms and case studies illustrated with applications of machine learning and deep learning in different domains, including disease prediction, software defect prediction, online television analysis, medical image processing, etc. Each of the chapters briefly described below provides both a chosen approach and its implementation. Audience Researchers and engineers in artificial intelligence, computer scientists as well as software developers.

Waiting for Messiah Rainbow Chang,2021-03-11 The pandemic of the 2020 Easter season has been seen as transformative for human life. However, the transformation that modern science will bring into human life is even more fearfully exciting in the big picture of human history. The pandemic triggered a deep urgency in the author to question the Easter story in light of frontier science. When death is near us, we often think more about life and truth and are filled with the urge to experience them both. In the Christian story, God was born, died, and was resurrected on earth; ascended into heaven from earth; and will bring the kingdom of God on earth. What will be the continuation of our Easter story if the earth is no longer our home? What's the real meaning of the resurrection of the dead in his return if modern science has achieved everlasting life before his return? In this book, the questioning of truth is blended with a deep faith in the truth. It shows that waiting for the Messiah is not a stilled life putting the future on pause but a dance of life. For the characters of this book, the dance of life in lockdown in a small town did not block their awareness of hunger, violence, and injustice happening in the world or limit their vision for the kingdom of God. That could be said about millions of lives at the time of Easter 2020, as millions of people have given their lives for others. Remembering the Easter of 2020 is remembering you.

Koombana Days Annie Boyd,2014-02-01 The elegant, ultra-modern SS Koombana arrived in Western Australia in March 1909; after only three years of service in the North West of Australia, the ship and her entire complement disappeared in a late-summer cyclone off the Pilbara coast in 1912. All 156 lives were lost but the wreck was never found. This thoroughly researched and compelling book comes closer than ever before to solving the mystery of Australia's most significant maritime disaster. Author Annie Boyd spent months camping along the coast, diving and investigating wrecks, researching the Koombana, and meeting with descendants of those lost in the tragedy. This insightful account is the culmination of her work, which includes a 20,000 page online resource with background material and primary sources.

Animals Alive DK,2011-03-21 What will life on Earth be like in one hundred years? Which species will go extinct and what new species will we discover? From the fantastical to the practical, *Animals Alive* looks at the possibility of re-creating extinct animals and provides information on what you can do to help keep animals alive. *Animals Alive* is an exciting exploration of animal life through the ages. Earth was once home to some very strange species, from a giant sloth the size of an African elephant, to the woolly mammoth and saber-toothed tiger. But why are they not alive today? The concept of extinction is explained, with a look at the death of the dinosaurs and the other major extinction events. We meet some of the fossil species that have outlived the dinosaurs and look at why they are so successful, as well as some of the animals pushed to extinction by people. Looking to the present, *Animals Alive* celebrates the diversity of life on Earth today. Animal profiles are packed with photos and include key facts, distribution data, and awe-inspiring information. Learn about the amazing long-distance

Processing, second edition Casey Reas, Ben Fry, 2014-12-26 The new edition of an introduction to computer programming within the context of the visual arts, using the open-source programming language Processing; thoroughly updated throughout. The visual arts are rapidly changing as media moves into the web, mobile devices, and architecture. When designers and artists learn the basics of writing software, they develop a new form of literacy that enables them to create new media for the present, and to imagine future media that are beyond the capacities of current software tools. This book introduces this new literacy by teaching computer programming within the context of the visual arts. It offers a comprehensive reference and text for Processing (www.processing.org), an open-source programming language that can be used by students, artists, designers, architects, researchers, and anyone who wants to program images, animation, and interactivity. Written by Processing's cofounders, the book offers a definitive reference for students and professionals. Tutorial chapters make up the bulk of the book; advanced professional projects from such domains as animation, performance, and installation are discussed in interviews with their creators. This second edition has been thoroughly updated. It is the first book to offer in-depth coverage of Processing 2.0 and 3.0, and all examples have been updated for the new syntax. Every chapter has been revised, and new chapters introduce new ways to work with data and geometry. New “synthesis” chapters offer discussion and worked examples of such topics as sketching with code, modularity, and algorithms. New interviews have been added that cover a wider range of projects. “Extension” chapters are now offered online so they can be updated to keep pace with technological developments in such fields as computer vision and electronics. Interviews SUE.C, Larry Cuba, Mark Hansen, Lynn Hershman Leeson, Jürg Lehni, LettError, Golan Levin and Zachary Lieberman, Benjamin Maus, Manfred Mohr, Ash Nehru, Josh On, Bob Sabiston, Jennifer Steinkamp, Jared Tarbell, Steph Thirion, Robert Winter

Secrets of Seduction: The Powerful Influence of Behavioral Psychology Applied to Seduction and Persuasion Paulo Roberto de Sá Araújo, 2021-10-02 Recent surveys reveal that about 84% of men feel insecure in flirting situations: whether due to lack of courage, fear of judgment, feeling intimidated by the beauty of women, not knowing what to say or even because of an ingrained shyness. This is because these men do not understand the psychological aspects and mental triggers that are behind any human interaction. In my teens, I was very shy and embarrassed to talk to women who piqued my interest, until I discovered that seduction and conquest skills could be learned and I could really become a skilled seducer if I learned the right techniques. After studying human behavior a lot and even graduating from courses on influence and persuasion, I became an expert in communication and finally understood how some men conquer women so easily, as if they were true magnets and attracted them to themselves with very little effort. Thinking about helping other men to overcome

these difficulties I wrote the book “Secrets of Seduction”, where I teach all the powerful techniques of influence, persuasion, NLP and seduction that really changed my life. I literally reveal all the secrets you've never been told about relating to women. In it, I teach practical strategies from basic to advanced to overcome any mental block, gain self-confidence, interpret signals of interest and, just by looking, know exactly who are the women who are interested in you. I also approach the best communication techniques with an almost hypnotic power to create connections, which helped me not only in the seduction aspect but also in several areas of my life. I hope this book adds the same value to you as it did to me.

Visual proficiency - A perspective on art education Kunibert Bering,Rolf Niehoff,2015-12-18 Every day, over a million images are uploaded to flickr. This is a striking example of the so-called »flood« of images that emerged with the beginning of the digital age. A generation of adolescents has already been socialised with this flood of images and deals with it on a daily basis, both in their networks and elsewhere. Art education thus faces significant challenges: art is the only school subject that deals with the problems inherent in images as images, making them the focus of pedagogic activity. This volume presents both the foundations for engaging with the phenomenon of the »image« in a competent and historically informed manner as well as the perspectives for art education that arise from these foundations. It is based upon the conviction that providing orientation in a world defined by images does not mean following solely a technocratic, functionalist or even neoliberal »concept of education«. Quite the contrary: »providing an orientation« for how to deal with images in a world that is dominated by them is a crucial part of the holistic development of young people's personalities. The volume's main focus lies upon the new functions taken on both by the image and by art more generally. It takes into account aspects of globalisation and participation and also includes more unusual views (often from a cross-media perspective) of art and its historical repertory, which even current image creation is unable to dispense with. The volume also deals extensively with architecture and the images it conveys.

Design: Mind the Gap scott trent, 2015-10-29 PLEASE NOTE THE FIRST 70 REVIEWS WERE PAID FOR BY THE AUTHOR AS AN EXPERIMENT TO TEST REPUTATION MGMT., AND DRIVING TRAFFIC TO THE BOOK/SUBJECT. This is Design Thinking! Similar to a man with no country, Design with a capital D has no home; yet, design is a part of many, many disciplines. Big D design is a process between disciplines. It is a practice embraced by all fields; but, founded in its own process. It is the space between thoughts, and the actions that dictate the next act. Design thinking is a perspective, an approach, an art, and a life style. It dictates how the world is viewed and provides a tool to address issues beyond the current comprehension. To understand design thinking, you must navigate the space between disciplines, ideas and conventions. To practice Design Thinking you must mind the gap. This book explores Design, Design Thinking, creativity and innovation.
