Images that Move Patricia Spyer, Mary Margaret Steedly, 2013 Images That Move is concerned with how images take place in wider worlds: how they move around, via processes of transmission and uptake, but, equally importantly, how they move their audiences affectively. Images play a significant part in projects of poetic world-making and political transformation. They participate in the production of commensuration or of incommensurability, enact moments of prophecy or exposure, and attract or repel spectators' attention. Images move, then, but not just as they wish, and any examination of images in motion must also recognise the blockages and breakdowns that prevent their movement as well as the enframings or stickinesses that trap them in particular places, prevent them from reaching others, or hedge their arrival in specific ways. The contributors explore topics ranging from high art to mass media, religious iconography to pornography, and popular photography to political cartoons in a range of contexts and media including photography in early twentieth century China, art and literature in contemporary South Africa, upscale real estate development in India, occult media images and the aesthetic of appearance in urban Indonesia, and film censorship in Nigeria. All of these instances of the visual continuum require different ways of highlighting and addressing the problematics of images in motion. Images That Move traces some of the tangled paths of images' travels and returns, unfolding their effects and aftereffects and scanning the diverse and variable publics-fixed or ephemeral, situated or dispersed-that these moving images call into being. Contributors: Ernst van Alphen, Christiane Brosius, Steven C. Caton, Finbarr Barry Flood, Brian Larkin, Oliver Moore, Rosalind C. Morris, Christopher Pinney, Patricia Spyer, Mary Margaret Steedly.

Vision Models For Target Detection And Recognition - In Memory Of Arthur Menendez Eli Peli, 1995-05-31 This book is an international collection of contributions from academia, industry and the armed forces. It addresses current and emerging Spatial Vision Models and their application to the understanding, prediction and evaluation of the tasks of target detection and recognition. The discussion in many of the chapters is framed in terms of military targets and military vision aids. However, the techniques analyses and problems are by no means limited to this area of application. The detection and recognition of an armored vehicle from a reconnaissance image are performed by the same visual system used to detect and recognize a tumor in an X-ray. The analysis of the interaction of the human visual system with night vision devices is not different from the analysis needed in the case of an operator examining structures using a remote (endoscopic) camera, etc. The book is organized into three general sections. The first covers basic modeling of central (foveal) vision and its theoretical

background. The second is centered on the evaluation of model performance in applications, while the third is dedicated to aspects of peripheral vision modeling and the expansion of peripheral modeling to include visual search.

The Photographic Image in Digital Culture Martin Lister,2013-09-23 This new edition of *The Photographic Image in Digital Culture* explores the condition of photography after some 20 years of remediation and transformation by digital technology. Through ten especially commissioned essays, by some of the leading scholars in the field of contemporary photography studies, a range of key topics are discussed including: the meaning of software in the production of photograph; the nature of networked photographs; the screen as the site of photographic display; the simulation of photography in the videogame; photography, ubiquitous computing and technologies of ambient intelligence; developments in vernacular photography and social media; the photograph and the digital archive; the curation and exhibition of the networked photograph; the dominance of the image bank in commercial and advertising photography; the complexities of citizen photojournalism. A recurring theme addressed throughout is the nature of 'photography after photography' and the paradoxical nature of the medium in the 21st century; a time when the traditional technology of photography has become defunct while there is more 'photography' than ever. This is an ideal book for students studying photography and digital media.
