Astrophotography Unleashed Richard Fairman, 2015-04-12 Astrophotography is a specialised type of photography that entails recording images of astronomical objects and large areas of the night sky. The first photograph of an astronomical object (the Moon) was taken in 1840, but it was not until the late 19th century that advances in technology allowed for detailed stellar photography. You do not need your own telescope, or digital camera to take beautiful astronomical photographs. The section Acquiring Images takes you step by step how to acquire images via free, or low cost remote telescopes. This book is aimed at those with little or no prior knowledge of astrophotography. You may be one of the many who have found the subject too complex or have achieved disappointing results. This book's step by step tutorial style will allow anyone to acquire, process, and display astronomical images of a very high quality. Where possible jargon is dispensed with, and replaced with understandable language and procedures.

Secrets of Seduction: The Powerful Influence of Behavioral Psychology Applied to Seduction and Persuasion Paulo Roberto de Sá Araújo, 2021-10-02 Recent surveys reveal that about 84% of men feel insecure in flirting situations: whether due to lack of courage, fear of judgment, feeling intimidated by the beauty of women, not knowing what to say or even because of an ingrained shyness. This is because these men do not understand the psychological aspects and mental triggers that are behind any human interaction. In my teens, I was very shy and embarrassed to talk to women who piqued my interest, until I discovered that seduction and conquest skills could be learned and I could really become a skilled seducer if I learned the right techniques. After studying human behavior a lot and even graduating from courses on influence and persuasion, I became an expert in communication and finally understood how some men conquer women so easily, as if they were true magnets and attracted them to themselves with very little effort. Thinking about helping other men to overcome these difficulties I wrote the book "Secrets of Seduction", where I teach all the powerful techniques of influence, persuasion, NLP and seduction that really changed my life. I literally reveal all the secrets you've never been told about relating to women. In it, I teach practical strategies from basic to advanced to overcome any mental block, gain self-confidence, interpret signals of interest and, just by looking, know exactly who are the women who are interested in you. I also approach the best communication techniques with an almost hypnotic power to create connections, which helped me not only in the seduction aspect but also in several areas of my life. I hope this book adds the same value to you as it did to me.

On Patrol Toenjes,2022-04-30 This book was prepared for police students. It provides a comprehensive overview of topics related to police work in Germany. The tasks were designed for a classroom setting and nearly all of them include pair or group work. The main goal of each unit is to encourage the students to speak in English using the vocabulary and phrases they will need when doing police work. The exercises focus on the language German police officers will actually need on the job, i.e. interaction with English-speaking civilians including drivers of vehicles, tourists, suspects, victims and witnesses. The tasks have been tested and improved in classes at the HfPV. Both American and British spelling conventions and pronunciation are indicated. The American spelling convention is used throughout the book.

Advances in Concentrating Solar Thermal Research and Technology Manuel Blanco,Lourdes Ramirez Santigosa,2016-11-10 After decades of research and development, concentrating solar thermal (CST) power plants (also known as concentrating solar power (CSP) and as Solar Thermal Electricity or STE systems) are now starting to be widely commercialized. Indeed, the IEA predicts that by 2050, with sufficient support over ten percent of global electricity could be produced by concentrating solar thermal power plants. However, CSP plants are just but one of the many possible applications of CST systems. Advances in Concentrating Solar Thermal Research and Technology provides detailed information on the latest advances in CST systems research and technology. It promotes a deep understanding of the challenges the different CST technologies are confronted with, of the research that is taking place worldwide to address those challenges, and of the impact that the innovation that this research is fostering could have on the emergence of new CST components and concepts. It is anticipated that these developments will substantially increase the cost-competitiveness of commercial CST solutions and reshape the technological landscape of both CST technologies and the CST industry. After an introductory chapter, the next three parts of the book focus on key CST plant components, from mirrors and receivers to thermal storage. The final two parts of the book address operation and control and innovative CST system concepts. Contains authoritative reviews of CST research taking place around the world Discusses the impact this research is fostering on the emergence of new CST components and concepts that will substantially increase the cost-competitiveness of CST power Covers both major CST plant components and system-wide issues
