**Animals Alive** DK, 2011-03-21 What will life on Earth be like in one hundred years? Which species will go extinct and what new species will we discover? From the fantastical to the practical, *Animals Alive* looks at the possibility of re-creating extinct animals and provides information on what you can do to help keep animals alive. *Animals Alive* is an exciting exploration of animal life through the ages. Earth was once home to some very strange species, from a giant sloth the size of an African elephant, to the woolly mammoth and saber-toothed tiger. But why are they not alive today? The concept of extinction is explained, with a look at the death of the dinosaurs and the other major extinction events. We meet some of the fossil species that have outlived the dinosaurs and look at why they are so successful, as well as some of the animals pushed to extinction by people. Looking to the present, *Animals Alive* celebrates the diversity of life on Earth today. Animal profiles are packed with photos and include key facts, distribution data, and awe-inspiring information. Learn about the amazing long-distance flights of the wandering albatross, find out how the great white shark uses electricity to track down prey, and witness the extraordinary migration of the monarch butterflies.

**Programming with Java** Radhika S. Grover, 2013 This 14-chapter introduction to programming with Java at the CS-1 level, uses multimedia-based programs as a means of instruction. Multimedia is a combination of various media such as text, audio, video, images, graphics and animation. With this book, students will learn Java using programs that draw graphics and

images, perform animation, read and play music files, display video, and more. This text uses clear explanations and illustrations, and does not require prior programming experience, knowledge of graphics, or other media API's. Programming with Java: A Multimedia Approach covers topics such as variables, data types, literals, operators, creating objects, Java 2D classes, user-defined classes, inheritance, interfaces, exception handling, GUI programming, generics and collections, and multithreaded programming. It also provides introductions to arrays and the scanner class. Turing's Craft CodeLab access is available for adopting professors. Custom CodeLab: CodeLab is a web-based interactive programming exercise service that has been customized to accompany this text. It provides numerous short exercises, each focused on a particular programming idea or language construct. The student types in code and the system immediately judges its correctness, offering hints when the submission is incorrect.

**Koombana Days** Annie Boyd, 2014-02-01 The elegant, ultra-modern SS Koombana arrived in Western Australia in March 1909; after only three years of service in the North West of Australia, the ship and her entire complement disappeared in a late-summer cyclone off the Pilbara coast in 1912. All 156 lives were lost but the wreck was never found. This thoroughly researched and compelling book comes closer than ever before to solving the mystery of Australia's most significant maritime disaster. Author Annie Boyd spent months camping along the coast, diving and investigating wrecks, researching the Koombana, and meeting with descendants of those lost in the tragedy. This insightful account is the culmination of her work, which includes a 20,000 page online resource with background material and primary sources.
